## Abstract

This WhitePaper will actually be a story about the state of human dramas experienced all over the world, rather than a technical presentation. Yes, there will be some technical details of course, but we will talk more about why the Babacoin Project emerged with the slogan "The First Blockchain Project Dedicated to Humanity". Because the Babacoin Project is the world's first global aid project using Blockchain technology.

In recent years, the world order has begun to change. The wars that started one after another, the global food crises, the economic crisis, the oil crisis, the fact that the countries were hostile to each other and grouped among themselves, caused separation between countries and people. The chain of war that started with the Middle East continues with the Ukraine - Russia war. Even neighboring countries can no longer tolerate each other. We are left alone with a world where we live in African countries with hunger and thirst, the problem of global warming, women being subjected to violence in many countries, children growing up under difficult conditions and many similar problems.

Aid organizations operating around the world organize financial and logistical aid campaigns for people experiencing all these problems. EU-supported funds are created and countries and people in need are helped through various channels. Do you think these aids are enough? No, it's not enough. If it were enough, the world we live in would be very different. But unfortunately, we see that not much has changed. This is where the story of the founding purpose of the BBC Project begins. We wanted to create a global aid network so that we can reach and help everyone we touch. Because now, someone had to do this by using the superior features of technology. Babacoin has succeeded in taking the first step on this path.

## Summary

There are many global organizations established around the world to help with health, money, logistics, food, education and similar issues. Some of the international aid organizations include:

- FAO. United Nations Food and Agriculture Organization
- IOM. International Organization for Migration
- OCHA Office of the Coordination of Humanitarian Affairs.
- OHCHR. High Commissioner for Human Rights.
- UNFPA. United Nations Population Fund.
- UNICEF. United Nations Children's Fund.
- WFP. World Food Program
- WHO World Health Organization

These aid organizations continue their activities with the funds allocated by the states and donations collected from the public. If there is a human tragedy, needy people or socio-economic problems detected in any country, they use their existing opportunities and funds for this. Of course, this is a meaningful step for the world, but none of these aids are sufficient and cannot reach the relevant places. Babacoin is not a global and official charity. It aims to support these aid campaigns only on behalf of humanity and ensures that cash aid is provided quickly, easily and safely. It is a Blockchain project that aims to support this movement of humanity with its secure infrastructure. All donations made within the scope of this project will be made with BABACOIN - BBC, so that cash donations can be made faster, without commission and easily from anywhere in the world.

The most important difference of the Babacoin Project from other aid organizations is the technology infrastructure it uses. BABACOIN - BBC, created on own Blockchain forked by RAPTOREUM. Babacoin is a project supported by the world's largest technology companies, world stars, social media influencers and international advertising agencies. Babacoin can reach the audience that ordinary charities would reach in 1 year, within hours. In this way, it gathers more support and contributes to making the world a more livable place.

## What is Babacoin Project?

The Babacoin Project is an international aid project with the support of Blockchain technology. Unfavourable conditions all over the world have unfortunately turned the world into a very difficult place to live in.

Babacoin is a humanitarian focus token with tremendous potential for addressing a variety of humanitarian needs.

Through BABACOIN, mankind will be receiving much-needed assistance through the BABACOIN Ecosystem. The technical features are also highly beneficial and up to current, using cutting-edge technology capabilities and smart Tokenomics. BABACOIN brings the power of cinema and celebrities combined with the disruptive nature of Blockchain technology to create a token that is for the services of humanity.

To create global awareness of humanitarian challenges and issues, as well as to respond to these issues and problems, BABACOIN was developed to spread a message of shared inspiration for a better world for our future generation. Humanitarian aid is the impartial, independent, and neutral provision of assistance to those in immediate danger and with Blockchain we will be able to impartially assist people in need globally. BABACOIN platform intends to leverage the NFT marketplace to help us achieve our mission of giving back to society through our cutting-edge NFT, which will be funded and supported by celebrities

## Main Purpose

Over the years, humanitarian issues in education, women's rights, the environment, biodiversity, ecosystems, and other philanthropic activities have been ignored or given little to no attention. These are the areas that suffer the most during humanitarian emergencies. The SDGs cannot be realized without tackling these concerns objectively. Even while world leaders struggle to fulfil the 2030 promise, nothing has been done globally to defend and safeguard women's rights, offer excellent education, develop functional biodiversity in the global ecosystem, and maintain a clean planet. The possibility of employing cinematic art to improve humanity's lot has been ignored for years due to the combined power of entertainment, financing partners, culture, and digital technology. To increase worldwide awareness of humanitarian challenges and crises and to respond to them. And to deliver a message of shared inspiration for a better society for our children's and grandchildren's future generations. Humanitarian causes have made the call, and BBC has responded by using a first-of-its-kind Token, with the worldwide goal of assisting humanitarian causes in the fields of Education, Women's Rights, Environment, Biodiversity, and Ecosystems. As well as other charitable activities via one of the largest charity corporations in existence. And as a means of exposing and assisting those in need, BBC's technical token is directed toward the goal of putting cinematic art to work for humankind by combining the power of entertainment, respected partners, culture, and digital technology.

## **The Goal of the Babacoin Project**

Babacoin is a generated Own Blockchain with tremendous potential for addressing a variety of humanitarian needs. The technical features are also highly beneficial and up to current, using cutting-edge technology capabilities and smart Tokenomics. By partnering with Better World Fund, these objectives will be achieved seamlessly and efficiently. To create global awareness of humanitarian challenges and issues, as well as to respond to these issues and problems, Babacoin was born. Furthermore, to spread a message of shared inspiration for a better world for our future generation.

Additionally, Babacoin platform intends to leverage the NFT marketplace to help us achieve our mission of giving back to society through our cutting-edge NFT, which will be funded and supported by celebrities.

## **Why Babacoin?**

Why Babacoin when there are so many official charities around the world? The answer to this question is very simple. The most distinctive feature of the BBC project that distinguishes it from other aid organizations is that cash aid can be made very quickly and safely. All transactions with BBC will be Small FEE. In addition, the world's most CHARITIYS, companies and social media influencers support the promotion of the Babacoin project. With this advertising effect, there is the opportunity to reach more audiences than the world's most famous charities

## Babacoin NFT Market

One of the most important steps of the BBC project is the Babacoin NFT Market, which will be created within the scope of the project. Babacoin NFT Market, where BABACOIN - BBC will be used, will be the most important financial resource of the project. In this NFT market, users will be able to sell their own NFTs or buy NFTs offered for sale in the market with BABACOIN - BBC. World-famous stars will also support the project fund by offering their NFTs for sale in this market.

Babacoin will transfer all proceeds from these NFT sales directly to the project fund. Users will also be able to donate some of their income to the project.

Additionally, Babacoin platform intends to leverage the NFT marketplace to help us achieve our mission of giving back to society through our cutting-edge NFT, which will be funded and supported by celebrities.

# nft

## Technologies Used by the BBC Project

### 1. Binance Smart Chain

Continuing its activities for more than two years, Binance Smart Chain (BSC) started to serve in April 2019. The platform running on Binance Chain is a DEX. In other words, with the Decentralized Exchange (DEX), users can make online crypto exchange transactions among themselves without the need for an intermediary. Running parallel to Binance Chain, the Blockchain (BSC) was much more flexible and could work with smart contracts. With its development, Binance exchange combined the power of Binance Chain with the flexibility of BSC. Binance Smart Chain continues on its way as a Binance Chain compatible with EVM and smart contract functions. Thus, Binance has a more advanced Blockchain dominance and has proven to be a good alternative on the DEX side as well. Binance, which is at the top of the list of the best among centralized exchanges, also leaves its competitors behind among decentralized exchange platforms. Contrary to popular belief, BSC is not the layer2 model of Binance Chain, but the Blockchain design is almost exactly the same. This is one of the biggest advantages of the Binance Smart Chain (BSC) network, which is not created as a second layer to Binance Chain. BSC can continue to serve even if the Binance Chain network is completely shut down.

## 2. Blockchain

Blockchain is a special type of database. Transactions are not managed by just one party, instead all transaction history is recorded in a decentralized and distributed ledger. Blockchain technology is secure and robust and therefore ideal for storing and processing sensitive information. The revolutionary feature behind the Blockchain is that transactions are completed not one by one, but by many computers at the same time. Blockchain offers groundbreaking technologies that have the potential to change the internet and even the world for many reasons. As you dig deeper to understand how Blockchain works, you will find that understanding the system is getting easier. Who can be trusted in a digital space where everything is easily copied and most users are anonymous? Blockchain can help solve this crucial question. A Blockchain is not updated and verified by a single person, but by hundreds, thousands, or even millions of community members at regular intervals. In the Blockchain, transactions are stored in blocks, and each newly created block refers to the previous block with a unique identification number called a "hash". These blocks form a chain, which is called a "Blockchain". This chain goes on forever.

"We are living through the worst period of human suffering since the Second World War," former United Nations Secretary-General Ban Ki-moon stated during the 2016 World Humanitarian Summit. In 2018, the United Nations declared that 131.7 million people in 42 countries required humanitarian assistance, with the expected cost of assistance being \$21.9 billion (United Nations Office for the Coordination of Humanitarian Affairs, 2019). Humanitarian aid is defined as "the impartial, independent, and neutral provision of assistance to those in immediatedanger" (Rysaback-Smith, 2015). It is critical because global humanitarian crises are growing in number and intensity as a result of conflict, natural disasters, climate change, food insecurity, and gender inequalities (United Nations Office for the Coordination of Humanitarian Affairs, 2019). Additionally, humanitarian crises are increasing lengthier in duration, averaging nine years (United Nations Office for the Coordination of Humanitarian Affairs, 2019).

The year 2020 demonstrated that human development is not an unstoppable force that may be assumed. Instead, a virus has thrown decades of development off track in the span of a few months. The needs resulting from Covid-19's effects are diverting resources away from other requirements, despite both being critically underfunded – far too many people are going without critical care. The funding response demonstrates the system's flaws and its capacity to satisfy people's needs while also emphasizing the critical role of non-humanitarian players in crisis circumstances to enable a successful reaction and recovery. This study provides light on the current state of crisis funding, the progress that has been accomplished, and the areas that require attention to improve the goal of rebuilding. By 2020, it is anticipated that 243.8 million people living in 75 countries will require humanitarian aid. This is an increase of 19 million people and ten extra nations over 2019. Seven nations have a needy population comparable to more than half of their total population. In the previous six years, the number of nations undergoing prolonged crises has quadrupled to 34. The average single-dose vaccination rate in these nations is 2.4 per cent, significantly lower than the rate in other developing countries, which is 12.5 per cent. The number of displaced persons increased by 3.4 per cent to 82.1 million, with more than half residing in nations at high risk of being affected by Covid-19's effects. The Covid-19 pandemic's effects have exacerbated the vulnerability of women and girls in humanitarian circumstances. However, our research demonstrates that they are frequently absent from data sets, limiting the extent to which their present and future requirements may be satisfied. Reestablishing order is not impossible. However, it is not inevitable. It will need deliberate action and concerted effort. It will need projects with a worldwide goal of assisting humanitarian causes in the areas of education, women's rights, the environment, biodiversity, ecosystems, and other philanthropic activities to put their shoulder to the wheel and accelerate their progress in the same direction.

## Causes of Humanitarian issues

"When a disaster strikes and affects vulnerable people who are unable to cope with the effects on their own, a humanitarian emergency is declared. Generally speaking, "vulnerability" refers to an individual's or group's lower ability to resist and recover from life-threatening risks, and it is most typically associated with poverty. Disadvantaged populations are more likely to be more vulnerable to catastrophes, whether caused by humans or natural disasters. People who are often considered vulnerable in impacted communities include children, pregnant or nursing mothers, migrants, and internally displaced persons (IDPs). The causes of the humanitarian crisis include the following:

- Natural catastrophes: these can be Geophysical in nature like earthquakes, tsunamis, and volcanic eruptions; Hydrological in nature such as floods, and avalanches, Climatological in nature like droughts; Meteorological in nature storms, and cyclones, or Biological in nature like epidemics and plagues
- Emergencies caused by humans: include military conflicts, airline and rail wrecks, fires, and industrial mishaps.
- Complex catastrophes, which frequently involve a mix of natural and man-made components, many sources of vulnerability, and a cascade of circumstances, result in a humanitarian crisis. Food insecurity, violent warfare, and displaced populations are all examples.

These in combination with other often give rise to the humanitarian issues that require urgent humanitarian causes and response. At BBC, we have partnered with Better World Fund as our partner with support from important actors from Hollywood and European cinema. We make the international commitment for sustainable goals (SDG) of the UN a reality.

## Humanitarian Response Overview

The response to humanitarian causes over the years has been below par with the magnitude of the crisis and its impact on the areas of education, women's rights, the environment, biodiversity, and ecosystems. Analysis from the UN Office for the coordination of Humanitarian Affairs (OCHA), which tracks the response of humanitarian assistance and donations to humanitarian causes presented below, demonstrates that, despite the extraordinary need, international humanitarian assistance has come to a grinding halt. International humanitarian assistance has declined by more than 20% every year. Moreover, because of shifting domestic priorities and the larger economic repercussions of the Covid-19 epidemic, funding from public donors has been stagnant in recent years. Estimated donations from private contributors did not show any improvement, however.

Compared with the need and appeal for assistance and donations, the figure below showed a huge funding gap and the need to urgently find a lasting alternative for assisting and funding humanitarian causes in our world today. Babacoin and ecosystem are positioned to offer the world's first-ever project with the global objective of helping Humanitarian causes through one of the biggest charity companies in existence. To increase worldwide awareness of humanitarian challenges and crises and respond to them, BBC is using cinematic art to serve humanity. Through the combined power of entertainment, distinguished partners, culture, and digital technology, it aimed to make use of the ecosystem's great potential in providing support to various humanitarian needs. And to transmit a message of shared inspiration for a better society for our children's and grandchildren's future generations. The UN-coordinated appeals summarize the funds necessary by United Nations agencies and non-governmental organizations (NGOs) to address humanitarian needs during significant disasters. The coordinated appeals procedure aims to allow a comprehensive approach to humanitarian response funds. In 2020, the Covid-19 pandemic's effects exacerbated existing crises, particularly in protracted crisis situations, leading to a considerable increase in humanitarian aid requirements. Despite this, the budget gap for appeals expanded faster than ever in 2020, and funding for non-Covid-19 pandemic-related requirements declined for the first time in five years. Total financial commitments lagged behind the rise in appeal requirements. The overall volume of help received for non-Covid-19 requirements decreased for the first time since 2015, resulting in a larger-than-ever financial shortfall, when combined with low commitments to Covid-19 appeal requirements.

## Blockchain in Humanitarian Intervention

The worldwide debate around Blockchain and cryptocurrency technology is rapidly shifting away from speculative concern that cryptocurrency is being utilized for dark web crimes and toward innovative curiosity that implies Blockchain might be used to augment and digitize existing solutions. As a result, DLT systems have a plethora of options to enhance the efficacy and efficiency of humanitarian initiatives. Among them include (but are not limited to) the following:

- In donor engagement
- Audit exercise
- Sovereign Identity services
- Supply chain and logistics
- Community token
- Natural capital and carbon tracking and Innovative financing

Traditional technological solutions and databases suffer from a laundry list of well-known issues, such as data loss, data corruption, and poor data entry, necessitating an expensive and time-consuming system of checks and balances. Additionally, most NGO systems are developed by and for a single organization, resulting in duplication across organizations. Even when in a shared system, the data's value is restricted to the organizations that have access to the shared system. Nevertheless, the non-profit sector is not alone in embracing Blockchain technology to promote good development and positive environmental outcomes.

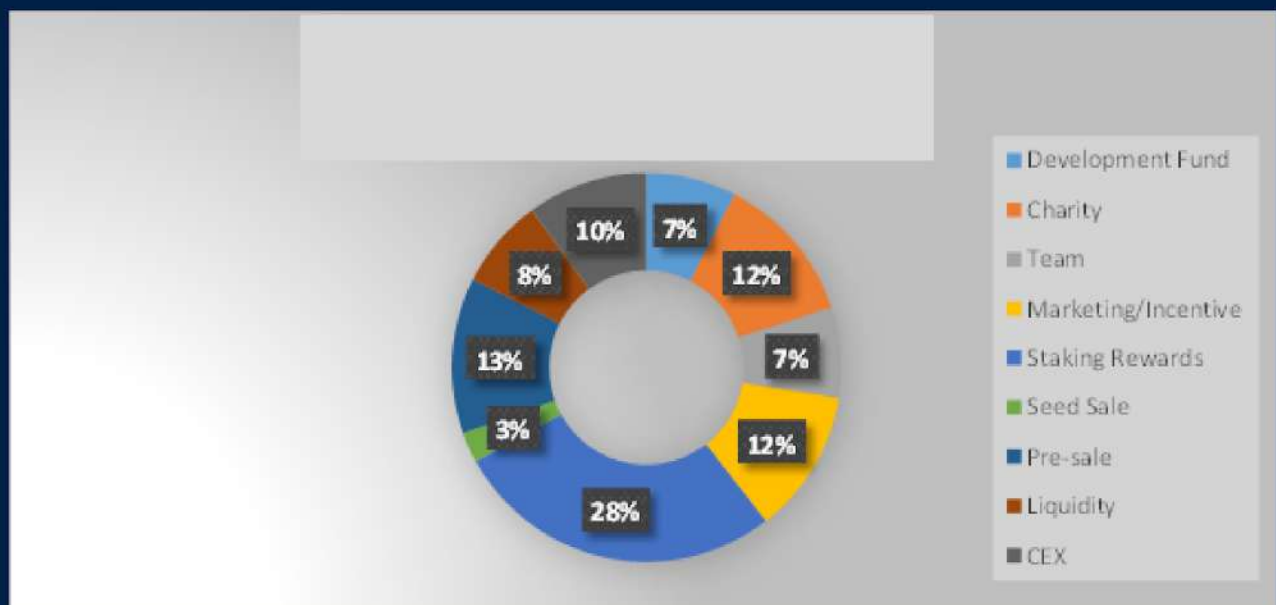

## Coin economics

Babacoin - BBC vesting period is 2 months on average. This is the layout of how the Babacoin will be distributed across the board. With a vast 12.5% of the total supply dedicated solely to charity, we are proud to say BBC is the first recognized token to partner with a charity organization. The charity organization will be in charge of the operation of the charitable outreaches that BBC will undertake. The token distribution will be allocated thus:

A total 1 billion (1,000,000,000) Babacoin will be supplied and allocated as indicated above. Priorities will be given to the staking reward fund, which will be allocated with 27.5% of the Babacoin maximum supply. Our Pre-Sale fund will follow this; the Pre-Sale will be allocated with 10% of the total supply.

Babacoin as hyper deflationary coin ensures that 1% of every buy and sell goes to the burn wallet, and each transaction is subject to a 6% tax.

## Taxes

**Reflection bonus:** BBC ecosystem like rewarding community members every 2.5% of all transactions are refunded in BBC to BBC holder's wallets as a reflection. This incentivizes holding and loyalty. You help Charity, and Charity helps.

**Hyper deflation:** with the Babacoin, every transaction sends 1% of its value to the burn wallet, which perpetually deflates supply.

**Liquidity Pool:** 1% of every buy and sell is utilized for liquidity to keep the Babacoin healthy as we grow. A vast and increasing liquidity pool improves the token's stability and guarantees that no single transaction has a large impact on the token.

**Treasury/Charity:** each transaction on BBC sends 1.5% to the treasury and charity vault.  $\frac{3}{4}$  of the tokens are utilized for charity, governed by Babacoin holders, and  $\frac{1}{4}$  is allocated to the BBC treasury.

# Road Map

## Q3-2022

- Web Page Announcement ( 90 % Finished )
- Listing on Exchanges.
- Charity Funds Sharing Start.
- Discord Wallet Bot

## Q2-2022

- Generating Genesis Block
- Making Wallets for Ubuntu, Windows and Mac OS
- Explorer Launch
- Creating Social Media Accounts
- Announcement on Bitcointalk
- List on MiningPoolStats

## Q4 -2022

- Publishing the Web Wallet
- Listing on Aggregators
- Coin Burning will Started On 01.11.2022

## Q1 -2023

- Creating a New Web Page
- Creating Own Exchange
- Listing on Major top 10 Exchanges.

## Security

The BBC Project security system is a toolkit for dApp developers designed to support the seamless interaction of dApps with the BBC Project Blockchain Network, offering a suite of utilities to help with the development and maintenance of smart contracts, wallet manager and block explorer. Taking advantage of BBC Project's security technology, the BBC Project Blockchain Developers also aims to build a high level of security for dApps and BBC Project Blockchain. Additionally, it helps to minimize the work required for the development and operation of apps. This allows app developers to focus more on improving the user experience, rather than hunting for solutions to technological problems, which means higher service quality. In order for the BBC Project Blockchain ecosystem to grow as an independent Blockchain network that aims to build up trust, a diverse array of agents must be allowed to participate freely. However, there are still technical limitations preventing large-scale, convenient usage and security issues regarding the governance structure of Blockchain networks have not been completely resolved. That is why BBC Project, in building the initial BBC Project Blockchain ecosystem, is focusing on how users around the world understand and experience Blockchain and crypto assets. As it develops, the BBC Project Blockchain will gradually open up, to enable a wider range of members to participate in the network according to the conditions of the ecosystem's growth, technological advancements, and sociocultural changes.

## Legal Disclaimer

This white paper belongs to the BBC ecosystem, and you must read this disclaimer and consideration before participating in this project. It is intended primarily for purchasers to whom the BBC ecosystem provides the opportunity to purchase Babacoins. This white paper is meant for participants in the Babacoin sales. The document and information contained herein are not exhaustive and do not aim to suggest any contractual terms. The primary goal of this white paper is to provide sufficient information to prospective token holders to enable them to perform a thorough study of the project and make an informed decision. We strongly encourage you thoroughly read this vision paper and any related documents, as well as the material on the website, before engaging in the purchase of Babacoins.

White papers are not legal documents and lack legal status in the case of a direct or indirect claim for compensation for any loss that may arise from reliance upon information contained in this vision paper, including profit or investment loss. BBC ecosystem and its representatives are not and will not be responsible for the market value of Babacoins, their liquidity, or the existence of any market for Babacoins through third parties or in any other way. This document is intended solely for informational purposes. It makes no claim to give complete legal or other advice.

This publication is intended to provide you with an overview of potential legal issues for which you may require counsel. It is prudent to seek comprehensive legal guidance from a skilled practitioner when confronted with special conditions. The information contained in this publication is accurate as of the date of publication.
